KARL MC JAY G. VALMORES

valmores.karlmcjay@gmail.com | +63 962 876 6984 | Cagayan de Oro, Philippines

PROFESSIONAL SUMMARY

Motivated Information Technology graduate (2026) with hands-on experience building full-stack web, mobile, and IoT applications. Proficient in React, JavaScript, Python, REST APIs, and database design, with a strong foundation in scalable system development. Eager to contribute to impactful, consumer-facing products in an agile, fast-paced engineering environment.

TECHNICAL SKILLS

Languages: JavaScript (ES6+), TypeScript (basic), Python 3.x, PHP
Frontend: React.js, React Native, HTML5, CSS3, Responsive Web Design
Backend: REST API Development, JWT Authentication, PHP
Databases: MySQL, SQLite, Supabase (PostgreSQL-compatible)
DevOps & Tools: Git, GitHub, Docker (basic), Postman, Visual Studio Code
Other: ESP32, IoT Development, System Troubleshooting

EDUCATION

Bachelor of Science in Information Technology | University of Science and Technology of the Philippines
2022–2026
Cagayan de Oro, Philippines

Relevant Coursework:
Database Management Systems • Systems Analysis and Design • Computer Networks • Operating Systems • Information Assurance and Security • Network Administration

EXPERIENCE

Queuing System | Internship Project, Northern Mindanao Medical Center (NMMC) | 2026
A modernized hospital queuing system redesigned during a hands-on internship to improve patient flow and operational visibility.

- Redesigned NMMC's legacy queuing system using a modern tech stack including Next.js, shadcn/ui, Prisma, and MySQL Workbench
- Optimized system flow and reorganized the layout for a clearer, more intuitive system overview
- Implemented role-based access control supporting multiple users and devices, including dedicated views for assessment, caller, and monitor (ticket display) roles
- Built an analytics dashboard for administrators to track queue volume, average wait times, and staff performance, supporting data-driven decisions on staffing and patient flow
- Added audio-visual ticket call-outs on the monitor display to improve accessibility and reduce missed calls for patients waiting in queue

Bantay Baboy: IoT-Based Ammonia Monitoring System | Mobile & IoT Application | 2024–2025
A real-time data platform demonstrating scalable data pipelines and mobile delivery.

- Developed a real-time environmental monitoring system with React Native mobile dashboards for end-users
- Built data collection and processing pipelines using ESP32 sensors, handling continuous data streams reliably
- Designed offline data synchronization mechanisms to maintain system reliability during network interruptions
- Implemented real-time push notifications and historical data reporting features for end-user experience
- Performed end-to-end testing, debugging, and optimization across hardware and software layers
- Adopted a cloud-based database (Supabase) to handle persistent storage of sensor data, supporting remote accessibility and simplified backend maintenance

CERTIFICATIONS

- Cisco CyberOps Associate – Certificate of Course Completion (January 2026)
- Ethical Hacking – Certificate of Course Completion (December 2025)

CORE COMPETENCIES

Full-Stack Development • Scalable System Design • Database Architecture • API Integration • Real-Time Data Processing • Agile Problem-Solving • Team Collaboration • Ownership & Initiative
